There’s No Place Like Home

To enroll or to find out more about the SLU Medical Home, call (314) 977-4700 or e-mail familymed@slu.edu.

Patients are seen at:

SLUCare Doctors Office Building
3660 Vista Ave., Ste. 108
St. Louis, MO 63110

Des Peres Medical Arts Pavilion
2325 Dougherty Ferry Rd., Ste. 100
St. Louis, MO 63122

University Club Tower
1034 S. Brentwood Blvd., Ste. 1120
St. Louis, MO 63117

Office hours are daily Monday through Friday and some evenings. Appointments can be made by calling (314) 977-4700.
The SLU Medical Home practice focuses on immediate medical concerns, management of chronic problems such as diabetes and hypertension, and preventive health care. The Medical Home places special emphasis on giving you the tools you need to live a healthy lifestyle. These features make our practice ideal for those who want to maintain good health and for those who want to manage their chronic medical problems.

As a part of SLUCare, co-payments for SLU Medical Home visits are discounted compared to visits with non-SLUCare providers.

The SLU Medical Home is open 8 a.m. to 5 p.m. Monday through Friday, as well as some evenings.

For more information about the SLU Medical Home, please call (314) 977-4700 or e-mail familymed@slu.edu.

Introducing The SLU Medical Home

The SLU Medical Home Team

The care manager, a nurse with extensive clinical experience and advanced education, coordinates all aspects of your care and serves as your personal health care manager. The care manager also takes a global approach to assess how well our patients are doing and identifies areas in which care can be enhanced.

An advanced practice nurse provides services similar to those of a physician, diagnosing and treating a wide range of health problems while also focusing on health promotion, disease prevention, health education and counseling.

Clinical lab scientists provide training on home testing, test preparation and collection. They clarify questions about tests/results and consult on the use of lab tests for diagnosis and monitoring effectiveness of treatment.

A diettian helps customize balanced nutrition plans for patients with weight issues, digestive diseases, diabetes and more.

A medical assistant helps coordinate your care, collecting test results and staying on top of your medical issues.

Physical therapists are health care professionals who diagnose and treat individuals of all ages who have injuries or illnesses that limit their ability to move and perform functional activities in their daily lives.

The occupational therapist considers mental and physical needs to facilitate each person’s ability to participate in valued everyday activities across all age spans, including self-care, caring for others, school, work and leisure.

A physician assistant works in partnership with your physician to diagnose and treat your health problems.

A pharmacist specializes in medication and disease-state management by helping you understand your disease and medications, selecting the right drugs for your unique medical needs and monitoring the safety and efficacy of your prescriptions.

A social worker helps break down barriers patients may have in accessing the health care system by helping sort out insurance issues and assisting those with transitional issues such as disability, unemployment, divorce or illness and mental illness.

Tying it all together is the family medicine physician, who provides personal, comprehensive and continuing care for the most important person on the SLU Medical Home Team: you.
