Accessing the Symantec Drive Encryption Desktop

- You can check the Windows system tray (the bottom right area of the task bar) for updates on its progress.
- Click on the lock with the black and yellow. This will bring up the PGP selection menu. Select ‘Open PGP Desktop’. You should be on the PGP Desktop – PGP Disk screen. Click on ‘Encrypt Whole Disk’, this will bring up the screen and you can view the status.
- Shows the disk that is being encrypted, the estimated time to encrypt. The ‘Power Failure Safety’ should be checked as well. This will stop the encryption in the event power is lost.
- You may close out of the program once you are done viewing the status.
