Billiken Wireless
Wireless Configuration for Windows XP

Step-by-Step Instructions

1. Click Start, Settings, then Network Connections.
2. Right click the Wireless Network, select Properties.
3. Under the Wireless Networks, click Add, and enter:
   - Network name (SSID): slunet
   - Network Authentication: Open
   - Data encryption: WEP
   - Make sure the only checkmark is for Key id provided for me automatically.
4. Click the Authentication tab, and set the following information:
   - Check Enable IEEE802.1x authentication...
   - Select Protected EAP (PEAP) from the EAP type drop-down menu.
   - Uncheck both check boxes below EAP drop-down menu.
5. Click Properties and set the following:
   - Uncheck Validate Sever Certificate.
   - Select Authentication Method: Secured Password (EAP-Mschap v2).
   - Uncheck the Enable Fast Reconnect box.
6. Click on Configure, uncheck the box.
7. Click OK to close all windows.
8. Click the Wireless Network Connection pop-up window that appears.
9. Enter your credentials:
   - SLU Net ID as the username.
   - SLU Net password for the password.
   - Click OK.

Please note:
- Remember: Once you authenticate, you will always be able to connect. But, if you ever change your SLU Net ID Password, it will change your password on the wireless network as well.
- If a visiting professor needs wireless access, contact the IT Service Desk at 314-977-4000 to set up a guest account.
