When Addictive Disorders Occur with Mental Illness

An overview of the ways treatment professionals can identify, diagnose and treat patients with concurrent addictive disorders and co-morbid mental illness. Seminar participants will learn about the overlapping symptoms in a dual diagnosis, determining the appropriate medical and therapeutic treatment plan and how addiction treatment and psychiatric medications including:

- the incidence and prevalence of concurrent substance abuse disorder and psychiatric disorders;
- the importance of early medical intervention and treatment of both illnesses;
- how and when addiction treatment and psychiatric medications can be used together and when they are contraindicated;
- the mechanism of brain function and new medical management on the horizon.

A “Best Practices” Panel Discussion — Life in the Trenches

An overview of the real-life clinical and therapeutic experiences of substance use treatment professionals who provide medication-assisted treatment. From addiction specialists including psychiatrists and a counselor, participants will learn:

- about the perspective of treatment professionals, other than physicians, with regard to using medications to treat addiction;
- how and when addiction treatment and psychiatric medications can be used together and when they are contraindicated;
- additional information from questions and answers from seminar attendees.

Learning Objectives for Drugs for Treating Addiction seminar include:

Who’s Using — and Misusing — the Drugs that Treat Addiction

An overview of the ways in which treatment professionals are effectively, ineffectively and inappropriately prescribing medications to treat addiction. Seminar participants will learn about the safe and rational use of medication for substance use rehabilitation including the:

- current FDA-approved medications available for substance use treatment;
- positives and negatives of medication-assisted treatment and recovery;
- therapeutic problems with these medications.
