The SLU eIRB tip of the month

When the IRB began the process of migrating existing paper protocols into the eIRB system, we moved a skeleton of information from our existing database into eIRB. After this process was complete, we noticed that some of the study titles in eIRB were cut off and are not complete. This is not a problem with the eIRB system. Our existing database had a word limit and was not able to store the entire title.

Please check your study titles to make sure they are complete. If your title does have words cut off the end, please either fix the title when you officially convert the protocol or if it has already been converted submit an amendment to correct the title. This will ensure that all documents are printing with complete titles.

The title box is located in the section 1-3 tab of Protocol Information (see attached document for picture).
The SLU eIRB tip of the month: March 2012

When the IRB began the process of migrating existing paper protocols into the eIRB system, we moved a skeleton of information from our existing database into eIRB. After this process was complete we noticed that some of the study titles in eIRB were cut off and are not complete. This is not a problem with the eIRB system. Our existing database had a word limit and was not able to store the entire title.

Please check your study titles to make sure they are complete. If your title does have words cut off the end, please either fix the title when you officially convert the protocol or if it has already been converted submit an amendment to correct the title. This will ensure that all documents are printing with complete titles.

The title box is located in the section 1-3 tab of Protocol Information (see attached for picture).
