Delete Protocol in eIBC

In order to delete a protocol, navigate to the “Delete Protocol” option either directly from your dashboard or from the “eProtocol” menu. Note that you can only delete protocols that have not yet been submitted to the IBC. Select the protocol(s) you would like to delete, click the “Delete Protocol” button, then click “Yes” in the new window that pops up.

The application will redirect you to the “Delete Protocol” page with a message that the protocol(s) was/were successfully deleted.
