Investigator Role - eIBC

The Investigator is responsible for creating protocols. Study Coordinators and Co-Investigators will be given the same access as Investigators.

The Investigator dashboard contains multiple sections where you can find your current (in preparation or submitted, approved, or non-active) protocols. You can also create, clone and delete protocols directly from your dashboard using the buttons on the right.

You can also navigate to the same functions from the “eProtocol” menu from the top left. The Investigator has access to the following functions from the “eProtocol” menu:

- Approved Protocols
- Clone Protocol (duplicate a protocol)
- Create Protocol
- Delete Protocol
- Investigator Home (takes you to your Investigator dashboard)
- Non Active Protocols
- Search Protocols
