

LTM Micro-Mini Calendar: Here are three versions that give you some essential calendar data for the entire year of 2010. The first two give you only the month-numbers, the days of the week on which those months begin, and the numerical date of the first Sundays of those months. You can easily figure out others dates from this. If the first is a Friday, then the (1+7)th is a Friday, and so on (1, 8, 15, 22, 29). If the first Sunday is the 3rd, then add 7's to realize that the Sundays of that month are 3, 10, 17, 24, 31. Add 1 for Monday, 2 for Tuesday, and so on. The five-Sunday months are **bolded** for the first version and underlined in the second. The third version is more self-explanatory: it gives letter-abbreviations for the months and all the numerical Sunday-dates. *Creative Commons Attribution-Noncommercial-Share Alike 3.0 United States License, 2009 Claude Pavur, Latin Teaching Materials at Saint Louis University.*
