The Sony software has a built-in web browser that allows the instructor to send a webpage to student workstations without the need of having students type in URLs.

To send a web-page to students, click on the "Internet" button. A web browser page will appear-- in the address bar, type in the URL of the page you wish to visit, and then hit enter. Once the page has appeared on your screen, click on the "Send Page" button to send it to students.

A web-browser window will appear on the student workstations, and students can interact with it normally. To close the student web browsers, click on "close page".
