Study of a Treatment for Severe Underarm Sweating

PARTICIPANTS NEEDED

A Prospective, Multi-Center, Parallel, Randomized, Double-Blinded Study of the Efficacy and Safety of the Ulthera® System for the Treatment of Primary Axillary Hyperhidrosis

Dr. Dee Anna Glaser and the Department of Dermatology are recruiting adult patients (18 and up) for a new clinical trial to treat excessive underarm sweating (axillary hyperhidrosis).

This investigational research study is testing the effectiveness of an ultrasound device to reduce the amount of sweat in underarms for patients with excessive sweating.

You may be eligible if you:

- Are 18 years of age or older
- Have severe underarm sweating that affects your daily life
- Have not had past surgical treatment of your underarm sweating
- Have not had Botox treatment to the underarms over the past year
- Satisfy other study entry requirements (as evaluated by study site staff)

You may receive, at no cost, the following:

- Study device treatment
- Study related physical exams
- Compensation for time and travel
