The Center for Sustainability—a graduate-degree-granting institute at Saint Louis University—is seeking applications for the following graduate-level research assistantships:

- **Sustainability** (with a focus on urban stream/river governance and human dimensions of urban pollinator habitat conservation)
- **Sustainability** (with a focus on facilities management)
- **Urban planning and development** (with a focus on community economic development and sustainable land use planning)

Graduate research assistantships are competitive and based on a candidate’s academic record and relevant experience rather than financial need. Assistantships are for two years and include tuition scholarships of 9 credit hours per semester during the 9-month academic year (18 hours total per year), a monthly stipend, health insurance, and extended library privileges. Research assistants work 20 hours per week for the university and may not have outside employment.

Candidates interested in a graduate assistantship must complete the online application for admission into either the M.S. in Sustainability or M.S. in Urban Planning and Development program by December 31, 2014.
