EDUCATIONAL OBJECTIVES

• Identify and critically analyze sinonasal anatomy and their radiographic appearance.

• Recognize and identify the relationship between sinonasal and functional anatomy – ie, how to maximize functional results while still preserving vital structures.

• Develop the manual skills required by practice on cadaver specimens so as to distinguish the “feel” of the multiple and varied sinonasal procedures.

• Demonstrate the surgical procedures using the endoscope performing sinonasal surgery and dissection under the guidance of expert faculty.

• Discuss medical treatment options for sinonasal diseases.

• Discuss proper indications, surgical management and complication selection.

• Develop the manual skills required by practice on cadaver specimens so as to distinguish the “feel” of the multiple and varied sinonasal procedures.
