Saint Louis University and YouGov surveyed 900 likely Missouri voters from August 13 to August 24 about the 2026 election, current political issues, and education policy in Missouri. The following pages present results for most survey questions. The margin of error for survey results for the full sample is 4.09%. Margins of error for questions asked to subsamples are listed below where available. Original data and analyses from the SLU Poll Directors are available at <http://www.slu.edu/poll>.

### Funding and Support

The August 2026 SLU/YouGov Poll was funded by SLU's College of Arts & Sciences. Additional grant funding from the U.S. Department of Energy supports the poll.

### About Saint Louis University

Founded in 1818, Saint Louis University is one of the nation's oldest and most prestigious Catholic research institutions. Rooted in Jesuit values and its pioneering history as the first university west of the Mississippi River, SLU offers more than 13,300 students a rigorous, transformative education that challenges and prepares them to make the world a better place. As a nationally recognized leader in research and innovation, SLU is an R1 research university, advancing groundbreaking, life-changing discoveries that promote the greater good.

## Methodology and Weighting

YouGov interviewed 1,276 Missouri (MO) registered voters with the goal of screening for and surveying 900 likely voters in the 2026 midterm elections. The 1,276 registered voters were matched down to a sample of 1074, yielding a target subsample of 900 likely voters. The respondents were matched to a sampling frame on gender, age, race, and education. The sampling frame was constructed by stratified sampling from the Missouri subset of the 2024 Current Population Survey (CPS) 1-year sample with selection within strata by weighted sampling with replacements (using the person weights on the public use file).

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, and home ownership. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2024 presidential vote choice as well as a four-way stratification of gender, age (4-categories), race (4-categories), and education (4-categories). The weighted dataset of 1074 registered voters was then subsetting to the 900 likely voters, and the weights were trimmed and recentered around 1, to produce the final weights.

Sample size: 900 with a credible interval of  $\pm 4.1$  percentage points. This survey has an estimated design effect of 1.25 yielding an effective sample size of 720.

The sample size for this question is 451. The margin of error for the full results for this question is  $\pm 5.67\%$ . The subsample answered the state of Missouri data center question before answering the local data center question. \* indicates 30 or fewer respondents in subgroup.

There is a proposal for the Missouri Department of Elementary and Secondary Education to publish annual A - F grades (similar to a report card) for public schools and school districts across the state. Grades will mainly be based on state test results and graduation rates...Do you support or oppose this proposal?
